Summary

Software Development Engineer with 5+ years of experience building scalable backend systems. Experienced in REST API development, microservices architecture, system design, and performance optimization.

Experience

Korn Ferry

Bengaluru

Developer II

01/2025 - Present

- Modernized legacy Node.js and TypeScript services by migrating them to NestJS, improving maintainability, scalability, and long-term platform extensibility.
- Architected reusable KFone module templates that accelerated API development and standardized engineering practices across multiple backend services.
- Enhanced API response performance by approximately 20% through database query optimization and efficient data flow handling.
- Reduced defect rates and accelerated bug resolution by approximately 20% through improved testing and root cause analysis.
- Implemented CI/CD pipelines and maintained over 90% automated test coverage, improving deployment reliability and code quality.
- Leveraged AI-assisted engineering tools to accelerate debugging, vulnerability remediation, code reviews, and feature delivery.
- Automated developer onboarding workflows through local setup scripts, reducing environment setup effort and accelerating developer productivity.
- Collaborated with frontend teams to design REST APIs, define request/response contracts, and implement integration workflows from Figma specifications.
- Remediated critical security vulnerabilities identified through Veracode scans and AI-assisted code analysis tools.

Korn Ferry

Bengaluru

Associate Consultant

06/2022 - 12/2024

- Engineered and supported RESTful APIs using C# and the .NET Framework for platform functionalities and integrations.
- Assumed ownership of platform modules following knowledge transfer from external contractors.
- Contributed to Infrastructure as Code initiatives using Terraform and Azure cloud services, enabling repeatable and scalable deployments.
- Documented APIs, business logic, and implementation details in Confluence and README documentation.
- Up-held engineering standards through unit testing, automation, and software development best practices.
- Resolved critical defects and delivered feature enhancements that improved platform reliability.

Tata Consultancy Services (TCS)

Bengaluru

Systems Engineer

05/2021 - 06/2022

- Designed and engineered ETL pipelines for extracting, transforming, and loading data into databases and CSV systems
- Contributed to centralized data warehouse solutions supporting downstream applications
- Developed data transformation logic ensuring consistency and accuracy
- Refactored JavaScript components to support evolving business requirements
- Streamlined ETL workflows, reducing execution runtime by approximately 25-30%

Education

University of Engineering & Management

Kolkata

B.Tech | GPA: 9.54 / 10

2017 - 2021

Skills

Backend & Programming: C# • .NET • ASP.NET • Web API • Node.js • NestJS • TypeScript • JavaScript • Java • Your Skill

Cloud & Infrastructure: Terraform • Docker • AWS • Azure

Databases: PostgreSQL • Your Skill • MongoDB • Redis

Architecture & Engineering: Microservices • REST APIs • System Design • OOP • SOLID Principles • Authentication • Authorization • JWT

Observability & Quality: OpenTelemetry • Datadog • Jest • Test Coverage • Monitoring • Observability • CI/CD

Tools & Collaboration: Git • GitHub • GitHub Actions • JIRA • Confluence • Postman • Swagger • Figma
