PROFESSIONAL SUMMARY

Senior Software Development Engineer with 5+ years of experience building scalable backend API systems using C#, .NET, ASP.NET Core, Microservices, and REST APIs. Experienced in developing cloud-native solutions on Azure, optimizing application performance, and modernizing legacy platforms. Proven track record of leading sprint delivery, driving cross-functional collaboration, and leveraging AI-assisted engineering tools to accelerate software development and improve code quality.

TECHNICAL SKILLS & CORE COMPETENCIES

Backend & Programming: C#.NET, ASP.NET Web API, Node.js, Nest JS, TypeScript, JavaScript, Java, C language.

Databases & Caching: MongoDB, PostgreSQL, Redis Caching, Database Design & Optimization, Query Performance Tuning, Indexing & Data Modeling.

Observability & Testing: Open Telemetry, Datadog, Jest, Automated Test Coverage, Continuous Integration/Continuous Deployment (CI/CD).

Cloud & Infrastructure: AWS, Azure, Terraform, Docker, Docker Compose, Kubernetes

Architecture & Security: Microservices, REST APIs, System Design, OOP, SOLID Principles, JWT Authentication & Authorization, Service-to-Service Communication, Event-Driven Architecture, API Gateway Integration & Deployments, Dependency Injection, Middleware.

Tools & Collaboration: Git, GitHub, GitHub Actions, JIRA, Confluence, Postman, Swagger, Figma, Agile Scrum Methodology, Cursor AI, Claude, GitHub Copilot.

PROFESSIONAL EXPERIENCE

Developer II — Korn Ferry

Jan 2025 – May 2026 | Remote

- Led the modernization of legacy Node.js and TypeScript services by successfully migrating them to C# .NET and ASP.NET Core-based microservices, improving platform maintainability, scalability, and long-term architectural extensibility by 30%.
- Architected and developed 5+ reusable KFone module configurations, shared libraries, and code templates, accelerating cross-team API development and standardizing backend engineering practices across global services.
- Enhanced API response performance by approximately 20% through database query optimization, efficient data access patterns, and streamlined service-to-service communication.
- Reduced production defects and accelerated issue resolution by approximately 20% through proactive root-cause analysis, code quality improvements, and structured verification workflows.
- Designed and maintained CI/CD pipelines while ensuring over 90% automated test coverage using Jest, improving deployment reliability and reducing production incidents.
- Leveraged AI-assisted engineering tools (Cursor AI) to accelerate debugging, technical analysis, vulnerability remediation, code reviews, and feature delivery.
- Automated local development environment provisioning through reusable setup configurations and scripts, reducing developer onboarding effort and improving environment readiness by 40%.
- Collaborated closely with frontend, product, and design teams to build secure REST APIs, define API contracts, and deliver seamless integrations from Figma-based specifications.

- Remediated critical security vulnerabilities and dependency risks identified through Veracode static analysis, secure coding reviews, and compliance-driven assessments.
- Acted as the Engineering Lead during the Team Lead's absence, coordinating sprint execution, prioritizing deliverables, resolving technical blockers, and driving team alignment across stakeholders.
- Successfully led the team through end-to-end sprint delivery, ensuring 100% completion of committed sprint objectives and delivering all planned user stories and technical tasks within agreed timelines.
- Mentored team members through code reviews, technical discussions, and knowledge-sharing sessions, contributing to improved engineering quality and team productivity.

Associate Consultant — Korn Ferry

Jun 2022 – Dec 2024 | Remote

- Engineered and scaled secure, enterprise-grade RESTful web services utilizing C# and the .NET Framework to manage critical platform functionalities and transactional integrations.
- Assumed comprehensive ownership of 3 core platform modules following structured technical knowledge transfer from external contractors.
- Contributed to cloud orchestration and Infrastructure as Code (IAC) initiatives using Terraform and Azure cloud services, enabling perfectly repeatable and scalable deployments.
- Documented APIs, complex business logic rules, and structural implementation details comprehensively across centralized Confluence hubs and repository manuals.
- Upheld team-wide software delivery benchmarks through rigorous unit testing, automated verification workflows, and strict agile development practices.
- Resolved business-impacting application failures and introduced targeted logic extensions that significantly stabilized overall platform availability.

Systems Engineer — Tata Consultancy Services (TCS)

May 2021 – Jun 2022 | Remote

- Designed and deployed programmatic ETL pipelines to extract, clean, transform, and map high-volume datasets smoothly into core database endpoints and CSV file systems.
- Contributed architectural logic to corporate centralized data warehouse designs, ensuring highly reliable upstream processing pipelines for interconnected downstream analytical engines.
- Formulated rigorous data transformation logic checks to preserve strict transactional consistency and business data processing accuracy.
- Refactored existing JavaScript client and server configurations to accommodate rapidly scaling transactional rules and evolving functional requirements.
- Streamlined and tuned complex data pipeline operations, reducing absolute workflow execution runtimes by 25% to 30%.

EDUCATION

Bachelor of Technology (BTech) in Computer Science & Engineering

2017 – 2021

University of Engineering & Management • Kolkata, India • **GPA: 9.54 / 10**
